EDITORIAL

Welcome to another special edition of *Café com BlackBerry Magazine*. This edition was a truly amazing run. We caught up a huge list of Top “Built for BlackBerry” developers that collaborated towards making this edition a success.

For those who do not know, this is a Brazilian magazine and has a different target audience, an audience that really loves what has in their hands, the BlackBerry smartphones.

For this audience, we created this magazine solely by passion and, in some parts, without gaining much so, only by the will to share the information for those who want to receive.

One of the greatest breakthroughs of this special edition is the fact that it will be our first World Wide edition, with versions in English and Brazilian Portuguese.

For this special edition, we have team up with **#TeamBBlogs** that always look for productive ways and means to promote BlackBerry as a brand, its products, as well as the developer community.

We have compiled a list of top app developers to showcase their apps and profiles and we also gathered an exclusive interview with Luca Filigheddu from BlackBerry, and we are trully grateful for the support and collaboration of all developers.

That’s all I have to say for this edition, I hope you enjoy and benefit from our publication.

Thank you for taking your time to download and read our magazine, have a good read!

“

I am really happy to see our developer communities followed and supported us during this important transition for our company. - Luca Filigheddu

Marco Gallo

Profile

M

arco Gallo. I live in Sicily (Italy), where the sun shines 360 days/years!

I got my first computer at 7 years old, an old and cool 386 full of splendid games, I still dreaming it sometimes!

I started to develop android apps on 2011 with many disappointment, I then switch at 01/2012 on BlackBerry Platform and i was so happy from hardware performances, big support and no more memory leaks! BlackBerry sent me a BlackBerry Playbook for update and improve existing apps and then I never stop the developing of new apps and games on this amazing platform. I ever created a local BlackBerry Developer Group thanks to Luca Filigheddu, and I support everyday many developers that want to join on BlackBerry platform.

I graduated in Computer Science in 2013, after 2 months I was chosen as BlackBerry Elite for my engagement in the BlackBerry Platform.

I prefer object oriented languages, indeed my programming languages are Java, Javascript, HTML5, C#. I develop games using the famous Unity3D Engine.

Apps Portfolio

<http://appworld.blackberry.com/webstore/vendor/24197/>

My fav app is Turbo Note: I develop this app during the BlackBerry Jam at Madrid in 2013, the app was intended as a joke because the first version of Turbo Note doesn't not contain any form of data storage.

I showed the apps to others developers and they where really surprised because Turbo Note really doesn't have any complicated storage system inside but simply rely on BlackBerry HUB notification!

Turbo Note is the fastest note-writing application of the world!

You can immediately take note of everything and share on social networks with a single swipe!

Functions:

- Save note in HUB as Notification (New Function !! Very Useful !!)
- Save note in Remember
- Set note as BBM status, share via BBM , BBM Channels!!
- Share via Mail , share via NFC
- Share via Facebook , Twitter , LinkedIn, Google+!!! + Save Notes in Calendar
- Coloured Notes
- Password Protection
- Backup your Notes on Remember

Coming! My Puppy Cat

Adopt a virtual Cat and relive the tamagotchi era of the 90's in a modern touch on your BlackBerry 10.

Your goal is to grow it and keep always happy.

My PuppyCat is the newest app by Marco Gallo and will be out before Christmas.

Features:

- Keep it clean by washing
- Tickle him for his pleasure
- Feed it
- Acquire Accessories
- Play with
- Get him out of the room to run freely

Selfie Cam

The perfect selfie application for you, SelfieCam bring selfie so easily!

A "Selfie" photo is a photo taken with your front phone camera at near distance, alone or with your friends,

Using Selfie Cam you can do "selfie" right and fast :

Open the app, pose and press the screen!

Rapid, cool and FREE !

Marine Assistant

Vessels tracking utility using AIS (Automatic Identification System).

Functionality:

- Native BlackBerry 10 Application
- Display vessel, boat, yoatch, military ships, fishing ships on maps using coloured markers and give information as speed, position, type and more (public internet datas).
- The app can track single ship and display the route using MMSI/IMO code.
- Search and track Ships/Vessel by name
- Weather information like wind speed, temperature, and solar ephemeris
- BBM integration
- Portrait/ Landscape Mode
- Easy Zooming

Nostalgia

Play and learn about retrogaming!

Nostalgia is not a simply breakout game, every level is inspired to a famous console or retro game of the past. It's super fun, addictive and full of Power-ups!

This is the first chapter, support the development of "Nostalgia" using donation button!

Full Working on all BlackBerry10 Devices : Q10, Q5, Passport.

Space Arcade

Unleash your inner astronaut and get engage in this awesome space shooting game. Shot down the asteroids to clean your path to the Plane, and defends your life from UFOs!

Grab Power up, minerals and additional life!

Everything free, on your BlackBerry10 !

Breakfast Saga

The most delicious saga after the candy epoch is HERE !

Super awaited by many fans, Breakfast Saga is the new 3-match puzzle game with a lot of goodies and improvements, it was designed using the best candy-players suggestions and their style !

Future Plans

I have planned the release of an enterprise application on first Q1 of 2015. Stay tuned!

 Marco Bavagnoli

Profile

Marco Bavagnoli. I am living in Vercelli, Italy.

I am a curious being and I always been attracted to technology and all kind of sciences especially astronomy. The step that introduced me into developing stuff, was when I was young and my dad gifted me a game console, a Texas Instruments TI99/4A with a cartridge for BASIC language :)

When PCs appeared, I started loving pascal, assembler, C/C++ and in 2005 I discovered the Qt framework. With my background of Qt and its introduction in the new BlackBerry 10 OS in 2012, it was easy to start loving BB10 not only for its brand, but also for developing.

My first app is been Tube, later on called Super2 due to the YouTube restrictions. It's now called SuperTube and it has also a new icon because of wishes of many user. I asked help about the design for the new icon to the users and I got awesome responses from them!

I always tried to listen to suggestions and critics from users, by this SuperTube is becomed very popular also for the many reviews written on many blogs around the world.

After a lot of updates, I thought that was the time to build also other apps: LapseLab HD, AudioExtractor, VideoShrinker, AvatArt, VideoGIFer, SupremeRadio, WallExpo. With this last app I won a voucher for for a BlackBerry certification test which I always wished, and now I am a proud BlackBerry Certified Native Developer!

I am not very active on social networks. I started to follow developers on the #BlackBerryDev IRC channel on Freenode (with ildeimos as the nickname) and on the BlackBerry developer forum.

Also attending to developer related events, let me meet some valued guys like **Luca Filigheddu (AKA @filos actually Global Developer Ecosystem at BlackBerry)** which is a real glue with us Italian developers, and also **Alessandro**

Bellotti (*BlackBerry Elite member*) golden friend and great developer with whom I developed some blog apps with some relevant success like MB10, Clic, Technonation, Berry-IL, B-FR.

Recently, with some other developer friends, I received the Silver BlackBerry Partner approval in the hope we will develop some useful enterprise applications.

Apps Portfolio

<http://appworld.blackberry.com/webstore/vendor/57559/>

SuperTube for Youtube

SuperTube is a Fully featured YouTube native client for streaming YouTube videos that let's you watch, download videos for offline use, rate, share and much more.

You can download SuperTube for free and it's available for all BlackBerry 10 handsets - *what's not to like about that?*

Some Features:

- BlackBerry 10 native look and feel.
- BBM connected application.
- List of preloading activities with percentage and bandwidth usage.
- PRELOAD videos
- EXTRACT AUDIO from your LOCAL VIDEOS.
- and much, much more...

LapseLab HD

Time-lapse photography is a technique whereby the frequency at which film frames are captured (the frame rate) is much lower than that used to view the sequence. When played at normal speed, time appears to be moving faster and thus lapsing. For example, an image of a scene may be captured once every second, then played back at 30 frames per second.

The result is an apparent 30-times speed increase.

WallExpo

Attach your device to usb or to a power supply and WallExpo will ask if you wish to start the slide show. Connect your device to your home TV by a HDMI cable to have a great experience.

A lot of transitions between photos and images are used and they can be chosen. Also choose photo folders you wish to display while playing music stored in your device.

VideoGIFer - animated gif maker

VideoGIFer allows you to take a short video clip, customize it, and then convert it to the popular GIF format to create an animated meme. The finished product can then be saved and set as BBM avatar, a contact picture, added to your Twitter profile, or even shared for others to enjoy as well!

It is also possible to save with mp4 format and share for example on FaceBook or any other social that support it.

Make you tweets, avatars, contact pictures, and other GIF compatible apps stand out with an animated GIF from VideoGIFer.

SERVIÇOS

A BlackBooster oferece serviços diferenciados para seus clientes. Procuramos atender de maneira rápida e eficiente para que os clientes se sintam satisfeitos com o serviço, com a agilidade, rapidez e com a qualidade do serviço e do atendimento.

CONSULTORIA

A BlackBooster é pioneira em serviços BlackBerry e especializado na plataforma. Damos consultoria e treinamento na plataforma dentro da sua empresa para funcionários que utilizam BlackBerry.

DIFERENCIAL

A BlackBooster possui diferenças quando se trata em atendimento, qualidade e segurança de que o seu BlackBerry vai voltar pra você funcionando perfeitamente do modo que foi comprado.

A **BlackBooster** foi fundada em 2010 com o intuito de atender a demanda em manutenção de BlackBerrys no Brasil, onde a dificuldade maior dos usuários em BlackBerry é encontrar uma empresa especializada e que entenda do assunto.

Trocamos peças de Tablet Playbook, o tablet oficial da BlackBerry

Fazemos troca de carcaças de todos os modelos de BlackBerrys

Fazemos troca de cabos flexíveis de todos os modelos de BlackBerrys

Trocamos telas touch, lcds, lentes de todos os modelos de BlackBerrys

TAMBÉM TRABALHAMOS COM AS MARCAS:

 Alessandro Bellotti

Echo

The last voice recorder

Profile

Alessandro Bellotti, residente in provincia di Varese, Italy. Hobbyist developer, with knowledge of object oriented programming.

Quite simply they are a computer expert, who for personal reasons, has developed its core business in the gas station and car wash self service.

I choose BlackBerry because I've had the opportunity to participate in the BBJam World Tour in Milan, I was assigned a device Dev Alpha and respect for the trust given to me, I started my adventure. Obviously the ability to publish on a store free, to have a detailed documentation and a support forum from impressive were relevant.

BlackBerry is like a family to me. I am honored to be able to develop on this platform and be a member of the BlackBerry Elite program. The platform is continuously improving and the opportunity to approach the enterprise sector is a new challenge / opportunity that I do not want to miss.

Emm ... what else to add? If not that I am honored to be a developer on the BlackBerry 10 platform.

Definitely hoping to continue the development of applications that can make pleasure and improve productivity of the users of BlackBerry

Apps Portfolio

<http://appworld.blackberry.com/webstore/vendor/39638/>

- Echo
- Food Diary
- Mc Finder
- Pizzino 2.0
- Clic
- MB 10
- Dev Group Italy
- and more...

Echo

The last
voice recorder

Echo

Echo is an app for BlackBerry 10 to make Voice Recordings; with Echo you will be allowed to easily record, play and share your voice recordings.

Echo is designed to be fast and easy to use: recording a new note, playing and sharing it in only 3 steps.

But Echo isn't just this.

With Echo you can differentiate your voice notes with 18 categories, fully customizable, whether by name or color.

All the Echo's features are available to use for FREE.

The app purchase is available just to remove banners for only 0.99\$.

Food Diary

The food diary is one valuable therapeutic tool. This is a Freemium App, for the first four days the app is fully functional, the fifth some functions are locked and can be unlocked with the purchase in the app.

Make use of a food diary in order to realize if you eat too much, or even if you do it casually, it is not the only function of this tool.

Mc Finder

Mc Finder is the unofficial app to find sales points McDonald's in Italy.

Always available offline is the product catalog McDonald's® with the nutritional values and allergens.

The data were taken from published data on the website of Italian McDonald's® and are supplied as they are at the time of publication of the app.

Luca Fil

**Manager,
Global
Developer
Ecosystem**

I am really happy to see our developer communities followed and supported us during this important transition for our company. - Luca Filigheddu

igheddudu

Biography

40 years old, Electronic Engineer, spent the past 14 years in various companies/startups in the field of telecommunications and social media.

At the beginning I worked as a developer, then as CTO/CEO/Founder, both in Italy and San Francisco.

I joined BlackBerry in July 2012 as Developer Evangelist and became Head of Dev Evangelism EMEA in August 2013. After that, in March 2014, there were some important changes and the role of Dev Evangelist doesn't exist anymore.

I am now managing the Developer Communities globally.

From the technical standpoint, I am a C++ developer and BlackBerry Certified Native builder, despite I don't have much time to code these days :-)

Exclusive Interview

Why BlackBerry and how did you become a BlackBerry Developer Evangelist?

My latest startup was not very successful and was looking for a change. A friend working for BlackBerry informed me about this position and I was hired in July 2012.

What does represent to you to manage the BlackBerry developer communities globally?

It means to stay in touch with the top developers who are bringing great content for our customers and engage them so that they can support us during the transition to our enterprise-focus in the best way as possible. We recently launched the Enterprise Developer Groups program, for example.

It is very important for us to make sure our developer community can still be successful now that the company is focusing on the business/enterprise market with lots of new innovative products and services, not devices only.

What do you think about this new era in BlackBerry development with Amazon AppStore available on BlackBerry 10?

Our agreement with Amazon is part of our ongoing commitment to provide our customers with greater choices and the best user experience.

Developer have more options now that the Amazon Appstore is preloaded on BlackBerry devices running BlackBerry OS 10.3.x starting with the BlackBerry Passport. The Amazon Appstore is available in 238 countries and preloaded on Fire tablets, phones and TV.

The Appstore is also integrated into the overall Amazon shopping app experience enjoyed by millions of Android customers.

 Oliver Martinez

twittly

Profile

Oliver Matinez, a.k.a. **NemOry** in the Digital World. I'm 22 Years old born from the Philippines stayed there for 21 years and now in the US Jacksonville City, Florida. I'm half American half Filipino.

I started programming when I was grade 3 elementary. like 12 years from now. I started programming with WML for Wap Sites. My facebook that time was <http://pinoywap.net> or PinoyWAP & G-Blogs / Globe Blogs. A filipino social network wap site and that's where I started to learn about programming.

I currently know how to program in: C/C++, QT, Javascript, Java, C#, Lua Script, PHP, Visual Basic. Markup languages: QML, HTML, XAML, XML.

In the past 4 years I was an android developer for like 2 years. then switched to Windows Phone & Windows 8 Development. Then when BB10 Came out with SDKs and stuffs then I started BB10 Development. Also in the middle of BB10 development I did play around with Unity3D and created an awesome unfinished game Kelly Escape.

And right now I'm very focused on making native bb10 apps. I'm also a BlackBerry Elite. I've created some systems like the BB10 Quiz Maker: <http://quizmaker.nemoryoliver.com/> and helped lots of devs push out apps in BB World before BB10 launch.

I've used tools like: Corona SDK, Unity3D Engine, Windows SDK, Android SDK, BB10 SDK, Web Stuffs.

Why BlackBerry?

I felt inlove with BB10 when I first seen it's UI, the dev alpha, the sdk and the unique features like the Hub, No Home Button all gesture based , I said to myself this is awesome. This will be the OS I want.

The amount of support as a developer in the BB10 platform is very good compared to the other platforms. BlackBerry provides development devices, early sdk access, webinars, swags, events and prizes.

Apps Portfolio

the amazing twitter client

Twittly

With unique and innovative features, Twittly aims to replace the Native Twitter app on BlackBerry smartphones, delivering the most advance Twitter experience.

"Twittly brings the most advance Twitter experience available of today, integrated to all the users favorite apps bringing an amazing connected Twitter experience," - Nemory Oliver, BlackBerry Elite Developer and CEO of Nemory Studios.

Snap 10

Snap a photo or a video, add a caption, and send it to a friend.

Features:

- share pictures and videos with friends
- post snaps on your story
- see stories, best friends and score of your friends
- draw and add text to your pictures
- search friends on your phone
- save your picture on your phone
- front and back camera
- manage your account privacy
- notifications.

Messenger for Facebook

The fastest and the most reliable Facebook Messenger Client for BlackBerry 10.

- Real Time Sending and Receiving Chats (no refreshing required)
- Stunningly Beautiful Design
- Start a Conversation
- Send Stickers (via plain text Links/URL)
- Update your Facebook Status within the App
- Very Fast and Fluid Performance
- Sent / Received Date and Time.
- and more...

Dater

Dater is the way everyone is meeting new people.

Dater will find out who likes you nearby and connect you with them if you're also interested.

1) Dater shows you someone nearby it thinks you should know, and lets you anonymously like or pass on them...

2) If someone you like happens to like you back, then Dater makes an introduction & lets you chat within the app.

<http://appworld.blackberry.com/webstore/vendor/53943/>

I'm a programming addict, but I do enjoy my life as well. I'm part of a group "NemOry Jackass / Jackasses of the Philippines", founded it since high school. I also have a band called "NemOry" That's where NemOry came from, we were playing a cover of the song Memory by Sugarcult.

We also do a lot of videos, funny, weird, dirty jackass videos. <https://www.youtube.com/user/NemOryOLIVER> and <https://www.youtube.com/user/NemOry3/videos>

 **BlackBerry**®

 Jeremy Duke

Mock It

Profile

Jeremy Duke, from the state of Alabama in the USA. I've always been a techy guy, but have traditionally been primarily focused on Web Development, building websites for clients.

Currently, I am a BlackBerry Cascades developer, BlackBerry Developer Elite member, and editor in chief / co-founder of OpenSourceBB (OSBB) where we attempt to educate developers, beginners and veterans alike.

I have always been a Blackberry enthusiast, but when the BlackBerry PlayBook launched I decided to take a look at app development and chose the WebWorks SDK as my starting point. I made a couple of apps for the PlayBook including a preliminary version of my current Built for BlackBerry application, Space TV.

Once the Cascades Native UI framework began taking shape for BlackBerry 10 devices, I decided to teach myself how to create native applications. My first app was SpaceTV and I used it to begin learning Cascades. Several months after launching v1 of SpaceTV, I had learned enough to completely rewrite and re-launch the app with a

completely new UI and improved code.

I use and promote BlackBerry because I value communication and productivity over all else when it comes to my mobile device. There is simply no other platform that caters to me. My first BlackBerry was the BlackBerry Storm, and have been a BlackBerry user since. I currently carry the Z30 as my primary device, but I also own a Limited Edition Z10 and a Q10.

Why BlackBerry?

I develop for BlackBerry for several reasons. Some of the reasons are the same reasons I am a fan, but there are some practical reasons as well. For one. The BlackBerry community is second to none and I don't think I could get the tight knit community feel developing for any other platform. Secondly, it is easier to get noticed building quality apps for BlackBerry versus building for other platforms.

Honestly, I cannot imagine building for any other platform. For me it's the community and the product for which I am building that matter most.

Apps Portfolio

When not mentoring developers, I have created and continue to maintain the following apps:

- SpaceTV
- Mock It
- Flow (for BerryFlow.com)
- The official OSBB app
- The TARDIS Team

SpaceTV

With Space TV for BlackBerry 10, you can stay up to date on everything from Astrophysics and Astronomy to NASA Launches and more!

- Live NASA TV (in HD)
- Space related news from all over the web
- NASA video on-demand - Astronomy Image of the Day (w/description)
- Latest images from the Mars Curiosity Rover (Mars Science Laboratory)

Mock It 2.0

Mock It

Mockit is the legendary “Built for BlackBerry” meme generator, device Mock creator and photo frame studio.

Mock It is the most powerful imaging tool for the BlackBerry 10 , a native application built and developed exclusively for the BlackBerry 10.

Use MockIt to create and share photos and images with style. With MockIt you can create custom memes, mock your photos in fake magazine covers, BlackBerry devices simulator and more.

There are some pictures you want to share all at once? Use the section frames to combine several sets of photos in a collage that you can seamlessly and easily distribute to your friends, family or anyone else!

<http://appworld.blackberry.com/webstore/vendor/53943/>

<http://opensourcebb.com>

Brandon Orr

Profile

Brandon Orr from Toronto, Canada. I work professionally as a Transportation Planner using various programs such as ArcGIS and AutoCAD which have introduced me briefly to some programming in Python and HTML helping me in my personal app development.

Ever since I was in University I had been interested in building my own mobile app. I went to the University of Waterloo which is where BlackBerry began. When it was time for me to upgrade from my iPhone I chose to support local and bought a Z10 on launch day. It was quickly apparent that there was a lack of apps for the platform at the time which made me decide to be part of the solution as opposed to just abandoning the platform.

In the summer of 2013 BlackBerry held a competition called the BlackBerry Jam Camp in Waterloo which was a two-day trip to Waterloo to learn the basics of BlackBerry 10 programming and then the goal was to build a built for BlackBerry App during the following two months to get a free BlackBerry 10 device.

PinGuin

There were also bigger prizes for first, second and third places. I decided to participate in the competition and start my mobile development career!

Before the BlackBerry Jam Camp I had zero mobile development experience, but some hard work and a lot of help from the awesome BlackBerry Developer community allowed me to complete my app and win first place in the competition!

What drives me to continue to the platform is the HUB and how the OS makes the daily tasks I have to do with my phone so much simpler. As I mentioned earlier I came from an iPhone which was great for app selection but I realized that I didn't really play games very often on my device and that my primary use was mainly messaging, social networking and Internet browsing. The hub was a godsend for me allowing me to quickly and effectively answer and receive emails, BBMs, texts, etc all in one inbox. The HUB has vastly improved since 10.0 and one of my favourite features now is pinch-to-view which allows me to quickly see all my unread messages.

Apps Portfolio

Apart from the HUB my favourite aspect of the OS is the integrated share framework which makes it ridiculously easy to share content to any of your social networks or contacts. I never have to open 5 or 6 apps anymore to do my messaging and social networking. I mainly just do it all in the hub.

Future Plans

Currently I'm working on a few different apps including a Mixcloud.com native Cascades client as well as an app that will allow people the search and share hockey arenas across North America as well as navigate to them. I'm a hockey referee so this will definitely come in handy to me.

In the future I plan to work on some more enterprise focused apps especially data collection apps for companies who currently do in-person surveys.

Favourite BlackBerry 10 Device

My favourite BlackBerry 10 device is currently the Z30, but I plan on getting a Passport to try and see if I can handle going back to a physical keyboard. The virtual keyboard on BlackBerry 10 is amazing.

I built my first app for the BlackBerry Jam Camp competition mentioned earlier. I chose to build an app that would allow users to save and share locations with users across all the major mobile OS. My mother and sister were constantly forgetting where they had seen a nice pair of shoes or a nice dress that they later wanted to return to or show a friend directions to.

Taking this as my inspiration I decided to build my app PinGuin which allows users to save locations and attach a photo with it as well as categorize it with a tag. When reviewing the location users could share the location or navigate to it using BlackBerry maps (sharing cross-platform opens up the shared location on the native map application in each OS by the way).

I later expanded on this functionality allowing users to add custom location tags and adding Pebble Integration through Talk2Watch allowing users to save locations through their smartwatch without having to enter the app and do it manually.

Pat Wallace

#BlackBerryPassp

#BlackBerryPassp

ackBerry®

Berry

BerryPas

#Black

kBerr

Profile

Pat Wallace and I reside in Kingston Ontario. I have been a brand advocate for BlackBerry for a long time and am proud to be part of the social elite BlackBerry team.

I work in the sales industry and the health care field and have done advertising, marketing and promotions for a wide variety of companies.

When BlackBerry 10 launched I was shocked that there was no option to quickly update all your status messages across social networks as 'Social Feeds' previously allowed BlackBerry users to do. I mentioned this to a good friend who in return began to build what you know today as QuickPost.

Why BlackBerry?

I have been a loyal BlackBerry user for many years as I firmly believe in using your smartphone as a productivity tool, not a toy.

I would never consider another option. BlackBerry knows what you need to do and makes the multitasking I do every day achievable.

BerryIL

קהילת משתמשי הבלקברי בישראל

QuickPost

by FeedGuru Apps

Type once, post everywhere.

QuickPost

Instead of typing out what you want to share multiple times, just type it once and QuickPost will push it to your social media accounts. The great thing about QuickPost is that it integrates with the accounts on your BlackBerry 10 device so you don't need to login again within the app. You can post to Twitter, Facebook, LinkedIn, even BBM Groups, BBM Channels and Blaq, great for if you want to share a link with the masses.

QuickPost has been downloaded around the world by thousands of hyper connected users. QuickPost has had a number of updates since launching in August 2013 and supports image sharing, status updating and even sharing what you're listening to. As BlackBerry continues to evolve and support new features QuickPost too, will continue to grow and expand to accommodate the features and requests from our customers.

Yogeshwar Padhyegurjar

Profile

Yogeshwar Padhyegurjar from India. I started with Mobile application development purely as a hobby and as a means to learn something new. I bought a Nokia C7 (Symbian based) smartphone mainly for application development. Before starting this journey I was already part of Indian IT industry mainly in Java EE area and working as Technical Architect.

Why BlackBerry?

I chose BlackBerry mainly due to 2 factors:

1) BlackBerry 10 platform - When I initially looked into the platform a mobile OS based on QNX (RTOS) and offering Qt as development environment intrigued me. I was never a BBOS user in the past but BlackBerry 10 offered me a great continuation path from Symbian. I was also given Nokia Lumia 800 as a developer gift device from Nokia but based on my free time I had to choose between Windows Phone or BlackBerry 10 and overall BlackBerry 10 personally suited me better.

2) Symbian was declared dead, so I needed to shift my attention somewhere. BlackBerry developer relations team had a offer going for loaning Dev Alpha device to Qt developers. I jumped on this offer and never looked back. When I started BlackBerry 10 development my Symbian application was already quite well established and I had a choice of doing a quick and dirty port or rewrite application from scratch in Cascades to get maximum support from underlying BB10 platform. I am glad that I chose the latter which not only made the application move integrated but also offered lots of nice APIs to work with. I think I completed the effort and had a basic working version ready in about 3/4 weeks and application was live in app world shortly after the platform launch in January.

Looking at the roadmap the current roadmap looks quite good in terms of OS (not so in terms of devices as full touch devices have been put on backburner due to the enterprise focus).

There are some worries like Fragmentation of app stores (Amazon app world) and some confusion about if native apps which target normal consumers will be allowed in app world in future.

I am currently looking for next medium/high end full touch phone from BlackBerry as

my next phone (upgrade from current Z10 LE edition) and plan to stay in this ecosystem as both user and developer. I personally feel BlackBerry offers currently one of the best development environment and I will continue to developer till that holds true.

My main motivation in development is learning new things and BlackBerry dev platform is helping me do that. Although I develop as a hobby I take the development and support very seriously and try my best to respond to feature requests/bug reports or general queries from the end users.

Apps Portfolio

Currently I develop & maintain a *Feedly/NewsBlur client* for BlackBerry 10 called **gNewsReader**.

gNewsReader

This application was originally developed for Nokia Symbian platform (also works on MeeGo phones like N9) and was meant to support Google reader as a backend.

As we all know Google stopped Google reader as a service while back so effectively both the original backend and platform of this application are now non existent. The Application had thrived despite is quite amazing considering this was done mainly as a Hobby project in my spare time.

When I initially planned to start developing mobile applications first question every application developer faces at the beginning is which application? For me the choice was simple because I was a heavy Google reader user and there were no good clients for the same on Symbian. When the application was ported to BlackBerry there was some initial competition with existing applications in app world but gNewsReader was able to outlast them all, survived the Google Reader shutdown.

The community support from BlackBerry ecosystem has been quite amazing including exchanges with fellow developer, user community, forums and blogger community and I will easily admit that the application owes a lot to the community.

It was also a great experience working with the Feedly team and I am quite happy that gNewsReader with Feedly support was available on the Feedly platform launch and endorsed officially on their site. I really like how accessible they are when I reach out to them and the response time is usually pretty good.

BlackBerry developer relations and app world support teams have also helped a lot and need to be thanked for the support extended by them without their active support the application would not have been a reality.

Shashwat Pradhan

Emberify

Profile

Shashwat Pradhan, a BlackBerry Elite Developer. I am a serial Entrepreneur currently serving as the CEO and founder of Emberify (<http://emberify.com>) where we have a 5 person team.

We work with Native Cascades apps. Emberify is a startup working on consumer based analytic and utility apps. Using contextual information, cloud integration and analytic technologies Emberify aims to create a more relevant mobile experience for their users.

I also consult at Max Secure Software where we have a large Built for BlackBerry apps portfolio. We work on security and privacy apps for both consumers and the enterprise BlackBerry is our focussed platform for the quality of great users and a great community. With prosumers and enterprises in need for quality of high productivity apps. It has been a great journey since the platform was launched on January 30th.

It's been a good two years of BlackBerry 10 development.

Apps Portfolio

Instant is one of the most popular apps that Emberify launched on BlackBerry World. Since BlackBerry users are addicted to their phones, Instant serves as a lifestyle app that tracks device usage and allows the user to set limits and reminders. We offer advance analytics with graphs. The plan is to add more analytic features and make it a central tracking/analytic app for users.

<http://appworld.blackberry.com/webstore/vendor/89800/>

<http://appworld.blackberry.com/webstore/vendor/57368/>

Reminder Now

People and Geo Based Reminders

Instant

Track your usage time

Reminder Now

Reminder Now is a contextual reminder app. With people and location based reminders, Reminder Now builds on the native BlackBerry experience of the Remember app.

Key features:

- Location based reminders- To remind you when you go to the selected place
- People based reminders- Reminders on an SMS/Email from the selected contact
- Runs in the background(headless)
- Integrated with the hub
- Favourite Places
- 2 step reminder creation
- Supports the BlackBerry Z10, Q10, Q5, Z30, Z3, Passport and the BlackBerry Porsche Design devices.

Using Location based reminders you can keep in track of your to-do list based on locations.

Instant - Track device usage

Instant is a lifestyle app, automatically tracks the daily usage of your BlackBerry. It can work seamlessly in the background(headless) tracking how much time you spend on your BlackBerry everyday.

Key features:

1. Automatically track your BlackBerry device usage time.
2. Get reminders in the hub with usage time and your daily remaining of the limit.
3. Track history of your daily device usage.
4. Share your usage with your friends with our '#InstantBB' hashtag.
5. Graphs of usage time percent and unlock count added with Instant 2.0.
6. Optimized for all BlackBerry 10 devices.

Instant will help you balance your life so that you can focus more on the people around you.

Future Plans

We are currently working with a company to work on an Enterprise version for Reminder Now. We also have couple of consumer app launches before the end of the year. Can't wait to launch them and bring them to the BlackBerry community.

Michael Muth

Profile

Michael Muth, 36 years old, born in Germany and began developing in the age of 12. I got a Commodore C64 for christmas and I found it just extremely cool to get stuff working. Just like today with my BlackBerry. ;-)

I began with Basic, learned some Assembler and C during industrial training and developed many years using Visual Basic at Work.

Why BlackBerry?

The reason and background of why you chose BlackBerry (if you also have BBOS experience, by all means – do tell)

Because Nokia “asked me” to do so. :-D

I was a Nokia fanboy for many years and I began to develop for those short after they bought Qt, a cross platform development framework for which I learned C++ from the ground up. It needs a lot of time to establish a completely new framework in your developer community and short after they invested

several years, got everything ready and the first devices arrived at the market the hostile take-over by Microsoft began and I got asked to begin again from zero and learn now .NET development for the uncapable Windows Phone devices.

Just during those times BlackBerry gave out Playbook tablets to interested developers which seemed to be also capable of Qt and in the same year more details about BB10 were unveiled. The use of Cascades framework was made based on the stuff Nokia has created and Qt was used as part of the native framework. Reason enough for me to take a closer look. Furthermore was the user interface concept of the first prototype device I got in my hands (Dev Alpha) surprisingly similar to my beloved Nokia Ng for which I needed a successor since Nokia was not longer capable of creating devices powered by Qt.

So I began to port my Symbian, maemo and MeeGo apps over to BlackBerry 10 and in the meantime I develop exclusively for this devices.

BlackBullet

By QtHelex

★★★★★ 133 Review

Apps Portfolio

<http://appworld.blackberry.com/webstore/vendor/31717/>

Details

notification at your BlackBerry Hub and thanks to Talk2Watch integration also as a notification to your pebble at your wrist.

It can acts also as a optional cloud extention for ClipMan and you can sent moreover stuff directly from a browser window at your desktop to the clipboard of your BlackBerry by simply using the keyword ClipMan in the title of a push notification. You will love it!

BlackBullet - a native client for pushbullet.com and IFTTT.COM.

The whole app is still work in progress and totally unfinished. Despite the fact that a lot of stuff is still missing I published the project in the meantime as public BETA because it is already a incredibly useful tool.

It is a app for device to device communication. You can sent using this app text blocks, links or even files from your BlackBerry to your Desktop, a iPad or Android Tablet. Also the other way arround.

Thanks to IFTTT.COM integration this works also automatically, based on stuff which happens on the Internet. Instagram, Facebook, Stock exchange, blogs, news... everything as a

“I’m just a small boring nerd which enjoys too much Coke and loves to create apps which helps people to stay productive. I’m a mixture of Homer Simpson and Sheldon Cooper...”

ClipMan Clipboard Manager

Future Plans

I'm currently developing BlackBullet full steam ahead (some push types are still missing, the headless integration needs to get done and a lot more stuff) and I have already my next application on the drawing board which I would love to begin as soon as possible.

This will keep me for sure busy for the next few months and until then I will have the next ones on schedule.

In case you're interested in news around the projects by @QtHelex don't forget to follow my BBM Channel: Coo3AE8FE

Note to the Community

If you like native apps don't forget to leave good reviews at BlackBerry World. In case you have suggestions or ran in any kind of issue drop the developer directly a EMail via BlackBerry World.

This way your questions can get answered and the developer is also able to ask for more details. Developing apps needs a lot of learning and is a incredible amount of work.

Sometimes you're just unable to see the smaller issues because of all the stuff you need to be aware of.

Just leaving a bad reviews won't help anyone, help the developer instead and the chance will get a lot higher that you get in the end the kind of app you really would love to have.

Thanks a lot for your support! :-)

Clipboard Manager

ClipMan is maybe currently the most useful app at BlackBerry World if you have to deal with texts, tweets and social networks at your BlackBerry device.

It doesn't matter if you just store text blocks to be able to answer faster your business email, if you write BBM postings in drafts within ClipMan without the danger of sending it out too early or if you are doing a complicated investigation at the Internet and collecting Links to interesting stuff.

It stores everything which you copy to the clipboard, headless and with the option to add a cloud extension to increase your productivity even more.

It is also a frontend to Turbo Reader and stores the last reading position. Hard to explain and the most users don't believe that they may really need such a app until they have finally used it for a few days. Just check some of the over 600 great 5 star reviews, I'm sure they are convincing.

IMHO the best invested 2 bucks at BlackBerry World!

BlackBerry

Rik Scheffer

Profile

Rik Scheffer from Netherlands. I started programming at primary school. There I was taught to write simple websites with HTML and CSS.

In the years after I learned a lot more about building websites. During middle school I started learning PHP and MySQL, so I could make interactive websites. Around the same time a friend convinced me to start making some games with Gamemaker, a simple tool for making simple games. Which was relative easy because of my previous gathered programming experience.

After a little while I wanted to make applications which could run on my computer. Due to my father's work, we had Visual Studio on our computer at home, so I started to learn C#. A few years later Windows Phone was launched, which enabled me to make phone apps with C#. And later on, with the release of Windows 8, I started to make apps for Windows 8. While making

some apps for customers, I also learned about writing apps for Android and iOS.

When BlackBerry held the BlackBerry DevCon Europe 2012 in Amsterdam, my home town, they offered all attendees a free BlackBerry PlayBook. This sounded great, so I attended and started to learn how to write apps for the BlackBerry PlayBook. I also joined the Dutch BlackBerry Developer Group.

For testing purposes BlackBerry gave me a BlackBerry 10 Dev Alpha A at the BlackBerry 10 Jam World Tour Amsterdam. This encouraged me to port my PlayBook apps to BlackBerry 10 and therefore received a Limited edition Z10. A couple of my apps got the Built for BlackBerry designation, for example Rumminy. In January 2014 a friend and I became Group managers of the Dutch BlackBerry developer group/BlackBerry Community NL.

Why BlackBerry?

The great parts of developing apps for BlackBerry are the ease of use of Cascades and its high flexibility. Another great thing of BlackBerry from the perspective of developers is that there are not that much apps, so you can be the first to make apps, which already have hundreds copies on Android etc. but none on BlackBerry, for BlackBerry. Also when you release an app it can easily get quite some exposure on BlackBerry.

After learning to build native apps for BlackBerry (with cascades) I also learned writing apps with Qt, which is very similar to cascades. Apps created with Qt can easily be ported to all major mobile platforms.

Apps Portfolio

My favourite app I built is *Rummy* for BlackBerry 10. It is a free online turn based game, just like the family game Rummy or Rummikub.

This fun game is easy to play, and during the game you can chat with your opponents.

My current plan with this game is to bring it to the other major platforms, so more people can enjoy it. The Windows 8 version is the first of those to be released. Leaderboards are also in the works.

<http://appworld.blackberry.com/webstore/vendor/22561/>

Games	
Their turn	
Sjaan	22m
Rummy 16523931	22m

Julian Tessmann

BPROFILE

Profile

Julian Tessmann from Germany. I am a Web-Developer, so i am loving HTML5/ WebWorks for BlackBerry 10.

Sublime-Text (a simple Text Editor) is my tool to write apps in HTML5/JavaScript. I know people love the native look of BlackBerry 10 Apps, so i am using the BBUIJS toolkit to get close to it.

I chose BlackBerry a few years ago with my older BlackBerry Pearl. After that i updated to the Curve 8520 and the Bold 9900. I used it a very long time and started to love BlackBerry more every day. Since the BlackBerry 10 release, i started to develop apps using a device-simulator. After a few apps, i was able to get a developer-unit from BlackBerry, the Dev-Alpha C. I joined a few developer programs and got my lovely red Z10LE and using it till know. I really like the BlackBerry 10 platform in all its ways, from the gesture based UI to its productivity - its simply professional.

The next step will hopefully be the Passport!

Apps Portfolio

I developed around 10 Apps for BlackBerry 10. From my favorite App "BProfile" to an app for my local soccer team, a car finder etc.

My favorite App is "BProfile", its just a simple small app, which lets you add BlackBerry logos and text to your own profile picture.

The idea was simple: Show all people your BlackBerry Love around the World in your profile picture!

After I submitted it to BlackBerry World the resonance was incredible. I got thousands of downloads in a short time, got request from BlackBerry-Blogs around the world, added more symbols and features every update.

BPROFILE

CREATE STUNNING PROFILE PICTURES FOR BLACKBERRY 10. WITH BPROFILE! *FREE.*

BPROFILE

BProfile is a free app which allow you to place a BlackBerry 10 Style Text-Block onto your profile picture. You can choose an existing picture from your gallery or you can take a new photo with your camera. After that you can add a text you like (21 characters max) and move around the Textbox. Add some symbols you want, drag them the place you want, change the color of the textblock and save it!

The picture size will be 500x500px, so it perfectly fits your twitter / facebook / BBM profile picture or any other avatar!

<http://appworld.blackberry.com/webstore/vendor/46952/>

Tony Cresswell

Profile

Tony Cresswell, a BlackBerry enthusiast, and general Jack-of-all-Trades. By day I work in IT, specifically with a background in databases and Unix systems. By night, well I don't wear cape and save the world, but I do write a few apps.

I like BlackBerry phones mainly because of my opinion that hardware keyboard devices have advantages not seen in all touch devices. I like speed dials, and I like the ability to launch your apps quickly by typing the apps names rather than fiddling around with a touch screen. BlackBerry seem to have the perfect blend of touch screens and hardware devices. They are the only manufacturer of phones that realise this currently, which is why I stay with them as providers of my phone of choice.

I learned to program in C and Java a great many years ago, and since I came to BlackBerry, I started as just an everyday user like many of us. However, I was inspired by a man who had written an application for BlackBerry 10 phones. Initially I agreed to help him test the app as I had a few problems with it, but in time, he wrote an api for it which inspired me to try and write apps that could use it. There were things I wanted on my phone that nobody had written. So that is where I started - I realised I could teach myself C++ and Cascades skills relatively simply, and I would be able to do something about getting the apps I always wanted to have. Thats where I started, and that's where I still carry on today - writing the applications BlackBerry 10 doesn't have that interest me, and sharing them with others.

Apps Portfolio

I have written 9 apps currently:

- SmartWatch Companion - Pebble Smartwatch integrated tools
- NFC Companion - same tools as Smartwatch companion, but no smartwatch barrier to entry - SWC for everyone else
- Cast - Chromecast support for YouTube on BB10
- BlockID - minecraft block id lookup tool
- MobID - minecraft mob id lookup tool
- Hue Companion - control your Philips Hue Lights from your BlackBerry 10 phone
- Coffee Companion - use your loyalty card with your favourite coffee shop
- MediaX - Native Plex Media Server Client application
- Passport Companion - support for iOS Passbook .pkpass files on BlackBerry 10.

My favourite is currently mediaX - this is a plex client.

<http://appworld.blackberry.com/webstore/vendor/86819/>

I have a lot of media and my app lets me use my Plex server anywhere in a way the android app doesn't. Android apps are all very well but for me there are certain advantages of speed and integration that an android app will never have.

For me its specifically the integration to Universal search on the phone. Coupled with a hardware keyboard, knowing my favourites films on my media server are as close as simply typing their name into the phone, anywhere in the world - well, I think that's about as cool as its going to get!

MediaX

MediaX

The first native Plex Client application has now arrived for BlackBerry 10, and makes full use of the most extraordinary mobile platform money can buy. If you love your Films, Photos, TV, and music, you've already catalogued them on one of the best Media Servers out there, so now enjoy what your BlackBerry 10 smartphone can add to that experience.

NOTE - TO USE THIS PRODUCT YOU NEED TO HAVE A PLEX MEDIA SERVER INSTALLED.

Bringing the speed and depth of system integration only a native app can bring, MediaX offers you:

- Guided Configuration of your application at first startup
- Full playback of all your media locally and remotely, even on 3g/4g connection - requires a free plex.tv account.
- Watch Items from your my Plex Queue on your handheld.
- *much more...*

Hue Companion

Hue Companion

Own a set of Philips Hue lights? Good news, the first native app to support control of Philips Hue lights on BlackBerry 10 has now arrived!

With deep integration into the BlackBerry 10, you can now conveniently control your lights, and at last leverage the power of your BlackBerry 10 phone with them.

Davide Massetti

M

ROME SUBWAY

Profile

D Davide Massetti, I'm 23, I come from Italy and I'm not a developer for job, I study Economy at University of Brescia.

I started to create apps in May 2013 with the tool BlackBerry App Generator but I didn't like what I created, then in the summer I started to study Cascades for create native apps.

I still write my apps in Cascades because I think it's best language to express look&feel of BlackBerry 10. I like a lot this platform and its community where people help each other.

I want to continue to write native's apps because I believe in a rebirth of BlackBerry in a consumer market too, it will not easy but I believe in it.

Apps Portfolio

I have 12 apps that earned "Built for BlackBerry" badge, I win "Built for BlackBerry Limited Edition Program", "Built for BlackBerry OnBoard Program" and EMEA final winner of the Built of BlackBerry OnBoard Program where I win 75.000\$ in marketing services; a few weeks ago I have entered in BlackBerry Enterprise Partner Program at Silver Tier.

<http://appworld.blackberry.com/webstore/vendor/63607/>

FROM THE COLOSSEUM TO THE VATICAN...

Rome Subway gets you there quickly and easily

Built for BlackBerry

Rome Subway

Perfect for those currently living in Italy, or tourists traveling in Rome, the Rome Subway app is so much more than a map of the subway system:

- Get help navigating the subway system
- Calculate the shortest route to your destination
- Obtain up-to-date ticket information
- Learn hours of operation
- See the latest tweets from @InfoAtac, the official Twitter account of the Rome Subway
- And much more!

Leandro Sales

BlackBerry

Profile

Leandro Sales, PhD in Computer Science from the Federal University of Campina Grande (UFCG) and teacher / researcher at the Instituto de Computação (IC), Federal University of Alagoas (UFAL).

Worked and / or coordinated projects in partnership with industry, such as BlackBerry, Epson, Nokia, Banco do Brasil, Soundtracker, 1Click2Eat.com, Agência Estado, Petrobrás, Odebrecht and Signove.

Currently, I'm coordinator of the BlackBerry Technology Center in Latin America, controlled by the Computação Móvel e Pervasiva of UFAL.

Expertise in distributed system, ubiquitous computing and Internet and Web, was CEO of Spry Software (Brazil / USA) and a founding partner of SalesTech, focused on technologies for personalization of mobile services market.

Have interest in projects developed with the participation of industry, especially in the area of services in pervasive environments, security and distributed systems with focus on communication protocols, especially on transport protocols.

Specialty programming in C++, Qt, PHP and Bash. Have over 25 articles published in journals, newspapers and conferences such as the Linux Magazine, Embedded Linux Conference, Linux Symposium (Ottawa), FISL (Fórum Internacional de Software Livre), PyCon Brasil, Journal of the Brazilian Computer Society (Springer), IEEE Transaction on Consumer Electronics, Journal of Engineering Applications of Artificial Intelligence (Elsevier), International Journal of Web and Grid Services (InderScience), International Conference on Consumers Electronics (ICCE), Symposium on Applied Computing (ACM/SAC), Wireless Communication and Network Computer (WCNC), International Conference on Mobile Ubiquitous Computing, Systems, Services and Technologies (UBICOMM), Brazilian Symposium of Computer Networks (SBRC) and Simpósio Brasileiro de Sistemas Multimídia e Web (WebMedia).

Why BlackBerry?

My story with the BlackBerry began in 2011 when we won the competition of the best application in Adobe Camp Brazil.

Then in 2012, I led a team that also won competitions such as Adobe Camp Brazil and two BlackBerry hackathons, one in Recife and the other in San Jose, California, both for best RedBull application. In this phase, several other projects began to appear in the context of the BlackBerry platform, which allowed me to specialize in the platform and develop other projects, such as judges application for the BlackBerry hackathons, the Ballom Tour (over 30 thousand downloads), the UPnPlayer, the FeetFit, among others.

In late 2012, we were invited to host the first BlackBerry technology center in Latin America, followed by other 4, but those were closed months later. Our history has been highly successful and strong work.

We developed the application for +9 for BBOS 5, 6 and 7, and only in three months in 2013, we ported 160 applications and Android games to BlackBerry 10.

Today I can no longer stop the development for the BlackBerry platform, neither stop thinking of innovative solutions involving BlackBerry devices 10.

To begin, the developer options are numerous, all based on solid proposals, such as Qt and Cordova. The quality of the hardware is also another point to note, the operating system stability is sensational and the security level is very high, which permeates all BlackBerry products.

So, I strongly believe that the BlackBerry platform won me over for these reasons that tastes naturally, not to mention the market opening and a fertile ground for any developer / company start having financial returns.

Apps Portfolio

I can name a few as my favorites, like UPnPlayer and FeetFit.

The UPnPlayer is an application that enables discovery and control of multimedia devices. In this context, it allows a user to play in your SmartTV, a video stored on your PC or on your own smartphone, and other features.

The UPnPlayer is a project built upon a framework called BRisa UPnP, which I also developed and today we have a team in the tech center focused on its evolution. Other projects are being developed, mainly focused on home automation, but the BRisa is not limited to this.

The project is open source and we are always looking for interested devs to help us.

FeetFit, is a step counter app, developed by two members of our team in the Tech Center.

There are plans for this application, mainly focused on monitoring the development of Parkinson's disease, but this is subject for an next opportunity.

<http://appworld.blackberry.com/webstore/vendor/55406/>

UPnPlayer

The UPnPlayer is a BlackBerry PlayBook app (a BlackBerry 10 version is being developed) allows users to find, control and share media content among DLNA-compliant home devices, such as TVs, computers and Network-Attached Storage (NAS).

Firstly UPnPlayer search for multimedia devices such as media servers and media renderers. Once devices are found, it allow the user browse the list of media items available in the found media servers and them reproduce them in the media renderers.

FeetFit

FeetFit is an application developed for all those people who wish to get in shape and be on control of all their activities. This is a native an intuitive application, where you just have to put it in your pocket and walk. The app automatically suit you and notify how much calories you've wasted during the day and the traveled distance.

FeetFit allows you to make daily achievements and share how much steps you've taken on any social network!

Future Plans

I am currently focused on developing applications to improve the productivity of the BlackBerry users. Indeed, this strategy is directed to all developers who currently I manage on the tech center.

Soon, we will have some interesting applications in the context of law and also in the context of personal financial control.

We already have some published applications such as ProTiming, focused on time management, working for private tutors, containing functions that enable them to easily organize their activities and charge their customers in an organized manner.

Another line that we are starting some work is the Internet of Things. In this context, I am working on board a simple solution based on the MQTT (Message Queue Telemetry Transport) as well as indoor location and, a little further away but still in context, a transport protocol called GMTP (Global Media Transmission Protocol) to mass distribution of live multimedia content.

Ivan Scher

 **Black**

Profile

Ivan Scher, Bahia, Brazil, 30 years of age, graduated in design major with focus on visual communication.

In early 2006 I started working with web design, flash animation, and then immediately AS3 programming, html, javascript and css...

I specialized as a programmer frontend. Worked in large companies in Salvador, Porto Alegre and now I'm in Ribeirão Preto, where I am a digital project manager at Alta Comunicazione.

I started working with the BlackBerry10 platform in 2012, the company made large investments in developers, making it super attractive. I was part of the beta tester Z10, won two sets in the rewards of blackberry programs.

The first app that I created have generated a big buzz because the platform was starting and just filled an important demand.

Future Plans

Now I began to develop using Cordova, from now on I intend to develop cross-platform apps, but I will always admire the BlackBerry which earned me some good results and in my opinion the Z10 and Z30 are among the top devices we have in the market.
